

# Nimbus Weekly Test

Nimbus Weekly Test is an android application that notifies a user of a pending 'fire alarm weekly test' with specific instructions of which Manual Call Points should be tested.

The user receives confirmation as tests are performed and the results are logged to the Nimbus Weekly Test log. The user may add photographs or comments to supplement the testing data.

A Nimbus administrator can configure when the weekly test is carried out and how many MCPs to test.

User defined pre and post test tasks can also be configured and delivered to the user such as 'contact the ARC to inform that a test is to be carried out' prior to testing and then 'contact the ARC to verify that a test was received' when tests are complete.

## Data is logged in Nimbus

Date	Description	Callpoints Tested	Pre/Post Tasks
Next weekly test due: 2016-09-20 09:30:00 (4 days from now) by James Wood			
Week 36 06 Sep @ 09:30:01	55 minutes James Wood Show details	8 / 8 tests passed	4/4 tasks complete
Week 35 30 Aug @ 09:15:04	55 minutes James Wood Show details	7 / 8 tests passed	4/4 tasks complete
Week 34 23 Aug @ 09:18:52	45 minutes James Wood Show details	7 / 8 tests passed	4/4 tasks complete
