

Nimbus Smart Phone

Nimbus Smart Phone provides the 3 Nimbus applications: Notify, Engineer & Weekly Test preloaded and secured on an easy to use platform.

- Schedule, Automate and Log Weekly Tests
- Receive Notifications
- Maximise engineer performance

Optimise your fire alarm log, improve fire alarm servicing and promote good fire alarm practice with a convenient ready to use Nimbus Smart Phone.

The Nimbus Smart Phone connects to Nimbus via a building Wi-Fi zone or an optional data enabled SIM.

Nimbus Smart Phone incorporates the LAN Control Systems custom Launcher which secures the phone and prevents users from running up data usage on external applications.

Nimbus Notify

Nimbus Notify delivers Nimbus fire alarm event notifications. Utilising Android push notification allows a smartphone to receive and display Nimbus events even when the smartphone screen is locked and the application closed. Nimbus Notify also allows a user to record the reason of a fire alarm to Nimbus for future analysis.

Nimbus Engineer

Nimbus Engineer works with Nimbus and Nimbus Mobile, recording the engineers' notes whilst testing. Engineer data is communicated to Nimbus and all activity, comments, photographs and bar codes are recorded against each device within the current Nimbus service period.

Nimbus Weekly Test

Nimbus Weekly Test notifies a user of a pending 'fire alarm weekly test' with specific instructions of which Manual Call Points should be tested.
