

Nimbus Control Room Monitor

Control Room Monitor is a remote alarm monitoring and control application to receive, display and log events from Nimbus connected systems including Fire Alarms, Intruder Alarms and Digital Inputs.

Alarms & Events are monitored remotely and presented to the operator in scales of priority. CRM events can be customised to present the operator with site specific and operational instructions.

Control Room Monitor is embedded within the PC operating system ensuring secure and continuous operation.

Nimbus events are presented to screen and flagged according to their priority level
