

# Nimbus Notify

- Delivers Nimbus fire alarm event notifications
- Repeats uncleared notifications until acknowledged
- Records and logs the cause of event

Utilising push notification allows a smartphone to receive and display Nimbus events even when the smartphone screen is locked and the application closed.

Nimbus Notify is totally configurable with: repeat alerts until cleared, selectable sounds and the ability for a user to feedback the cause of the event, ideal for recording false and or unwanted alarms.

Events can be cleared with a comment to record the reason of the unwanted alarm, essential in managing false alarm activity.

Comments are recorded against the event and uploaded to Nimbus. Users can then search for and review alarm comments through the Nimbus web portal.
